

**We are looking for parents  
as study participants**

# Aim of the study

We would like to find out what similarities and differences exist between Selective Mutism and Autism Spectrum Disorder. This is particularly important for diagnostics, but also when it comes to providing the best possible therapeutic support for the affected children.

We are looking for:  
parents of children (4-12 y.o.)

- with Selective Mutism or
- with Autism Spectrum Disorder or
- without a mental disorder

Study content:

- Online questionnaires about your child's behaviors
- Duration: approx. 40 minutes

**Any questions?**
